WSP - TALENTGEIST PROJECT

Accelerating Coca-Cola's Healthy Beverage Portfolio

Marketing strategy for Indonesia

Foo Wei Ming

fooweiming1@gmail.com

18 October 2026

Executive Summary

Make Coca-Cola's healthy drinks the trusted, convenient choice for Indonesia's sugar-aware youth

51%
of Coke volume is juices, water & teas, growing 8-10% a year

18%
link Coke to "health or balance" (61% say "fun")

11%
Coke digital share vs 18% PepsiCo, 20% Suntory

US$10M
over 5 years, piloted in Year 1 (US$1.5M)

Problem	Demand exists (72% of 18-35s monitor sugar) but Coke lacks credibility as a healthy brand.
Target	Urban Gen Z and young millennials, 18-35, in Jakarta, Bandung, Surabaya.
Strategy	"Treat Moments, Balanced": creator-led social + Mom-and-Pop store visibility + e-commerce and loyalty.
Budget split	40% social | 25% Mom-and-Pop | 20% e-commerce | 5% measurement | 10% reserve
Year-5 goals	Health association 18% to 30%; digital share 11% to 16%; healthy growth 8-10%/yr.

Background 1: Competitive Position

Where Coke stands vs rivals, and why

26%

Coke regional share, #1 (PepsiCo 18%, Suntory 10%, Nestlé 8%)

+2%

Sparkling growth (44% of volume)

+8%

Juices growth (28% of volume)

+10%

Water & teas growth (23% of volume)

Why does Coke lead?

- Brand: most recognised soft drink in Indonesia, **82%**
- Reach: widest Mom-and-Pop distribution
- **Not price**: Indonesia volumes fell 7% (Q3 2023) while a new price-pack strategy was built for affordability

Rivals

- Real Indonesian rivals are local: Teh Botol Sosro, Teh Pucuk, Pocari Sweat
- Pepsi's Indonesian presence is limited (YouGov)
- Threat to healthy range = local teas and water, **not PepsiCo**

Further study: Coke's share 5 years ago; price per litre vs rivals; rivals' growth rates. Needs Euromonitor / Kantar data or a store price audit.

Sources: Case brief (share, growth); Kurious/Katadata 2023 (82%, n=225); CCEP Q3 2023 call; YouGov.

Background 2: Mom-and-Pop Stores

Still the biggest channel

55%

of Coke sales via Mom-and-Pop (General Trade)

32%

via Modern Trade (supermarkets, convenience)

13%

via e-commerce & quick commerce, doubling by 2028

67%

of all Indonesian FMCG sold via traditional stores (68% a year earlier)

What it means

- Mom-and-Pop remains dominant, with slight erosion
- Healthy drinks must be in the Mom-and-Pop chiller to win trial
- Gen Z still buys here for convenience

Coke is digitising it

- Klik Toko ordering app (2021)
- Warung Pintar partnership: 500,000+ stores, with data on distribution
- New route-to-market model (2026)

Further study: Change in Coke's channel mix vs 5 years ago; % of Mom-and-Pop stores stocking Coke (and its healthy range). Needs a retail audit or CCEP data.

Sources: Case brief (55/32/13%); Kantar via Databoks, Q1 2025 (67%, industry-wide); CCEP; Republika; Warta Ekonomi.

Background 3: E-commerce

Fast-growing channel where Coke is behind

11%
Coke share of digital beverage sales

18%
PepsiCo share

20%
Suntory share

+48%
SEA e-commerce beverage sales growth, 2020-24

Why is Coke behind? (hypotheses)

1. Distribution built for Mom-and-Pop; digital is recent
2. Heavy single-serve fizzy suits stores, not parcels; rivals sell tea and water multipacks
3. Less creator-led content on TikTok Shop / Shopee
4. Healthy range less visible online

Solutions

- Flagship stores with healthy multipacks
- Creator livestreams on TikTok / Shopee
- GrabMart / GoFood quick-commerce listings
- AI-personalised offers + gamified loyalty

Further study: Reasons Coke lags are our hypotheses. Verify with brand-level online share by platform and interviews with CCEP's e-commerce team.

Sources: Case brief (all stats); Compas via Industry.co.id (Indonesian FMCG e-commerce +27% in 2025).

Background 4: Awareness of Coke's Healthy Direction

Do Indonesians know Coke is going healthy?

82%
Coke brand recognition (Kurious 2023): reach is not the issue

18%
link Coke to health or balance

61%
link Coke to fun and treats

72%
of 18-35s actively monitor sugar

What we know

- No survey measures awareness of Coke's healthy shift
- Zero Sugar and Sprite Zero launched in Indonesia in 2023; Coke Zero Vanilla in 2026
- Brand is known, but not as a healthy choice

So what

People know Coke but **not that it has healthy options**.

Our plan builds the "balance" association through creators and in-store visibility, and tracks it with a baseline survey.

Further study: Aided and unaided awareness of Zero Sugar, Ayataka, Minute Maid among 18-35s. Run a survey (n~1,000) before launch; repeat yearly.

Sources: Case brief (18%, 61%, 72%); Kurious/Katadata 2023 (82%); CCEP Q3 2023 and H1 2026 releases.

C - Clarify & Contextualise

Is it a real problem? Yes: growth is in healthy drinks, but Coke isn't seen as healthy

51%

of Coke volume already in healthy drinks, growing 8-10%

44%

sparkling, growing only 2%

74%

will pay 10-15% more for low/no sugar

82%

of Gen Z discover drinks on TikTok, Instagram, YouTube

Benchmarking

vs rivals: digital share 11% vs 18-20%
vs history: healthy grows 4-5x faster than sparkling
vs best-in-class: win trial online, back it with everyday availability

Reframed problem

How do we turn sugar-aware 18-35s into repeat buyers of Coke's healthy drinks, when only **18%** see Coke as healthy?

A - Analyse the Drivers

MECE funnel: Perceive > Try > Find > Repeat. Hypotheses tested against the data

Driver	Evidence	Decision
Perception	**18%** link Coke to health vs **61%** to fun	**PRIORITISE**
Digital discovery	**11%** digital share vs 18-20%; **82%** of Gen Z discover online	**PRIORITISE**
Availability	**55%** of sales via Mom-and-Pop; healthy SKUs less visible	**PRIORITISE**
Price	**74%** will pay 10-15% more	**DE-PRIORITISE**
Repeat purchase	No loyalty or personalised offers on healthy range	**LATER (Y2+)**

Target: urban 18-35s. **Channels:** TikTok / Instagram (discover), Mom-and-Pop (buy), GoFood / GrabMart / Shopee (repeat).

L & P - List and Prioritise Solutions

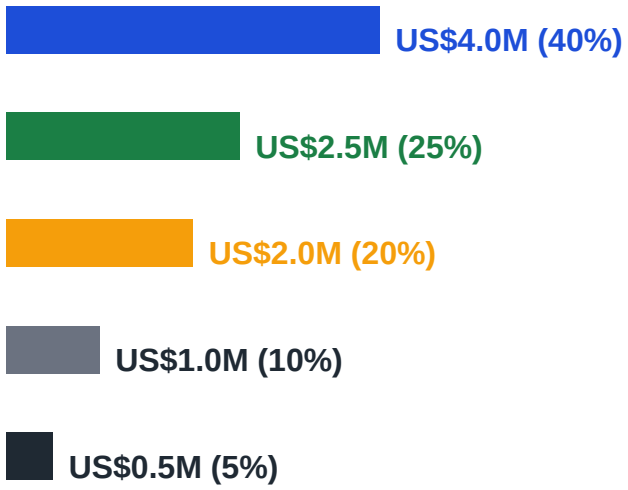
Scored 1-4 (4 = best; for cost, 4 = cheapest). Illustrative, to be validated by pilots

Solution	Reach	Ease	Fit	Cost	Avg	Call
1 Creator-led social: "Treat Moments, Balanced"	4	4	4	3	**3.75**	**INVEST**
2 Mom-and-Pop chillers, small packs, signage	4	2	3	2	**2.75**	**INVEST (long-term)**
3 Quick-commerce bundles + AI loyalty	3	3	4	3	**3.25**	**INVEST (phase in)**
4 Mass TV / OOH campaign	3	3	2	1	**2.25**	**DEFER**
5 New reformulated product	2	1	3	1	**1.75**	**DROP**

Why #1: most reach at low cost, fixes the biggest gap (perception), testable in weeks. #2 and #3 convert interest into sales.

US$10M Over 5 Years

Pilot, measure, then scale what works



Phasing (US$M): Y1 1.5 | Y2 2.0 | Y3 2.2 | Y4 2.2 | Y5 2.1

Y1 pilot: Jakarta + Bandung, 200 Mom-and-Pop stores, 1 quick-commerce partner. Scale only if KPIs beat control.

How we measure

Tests

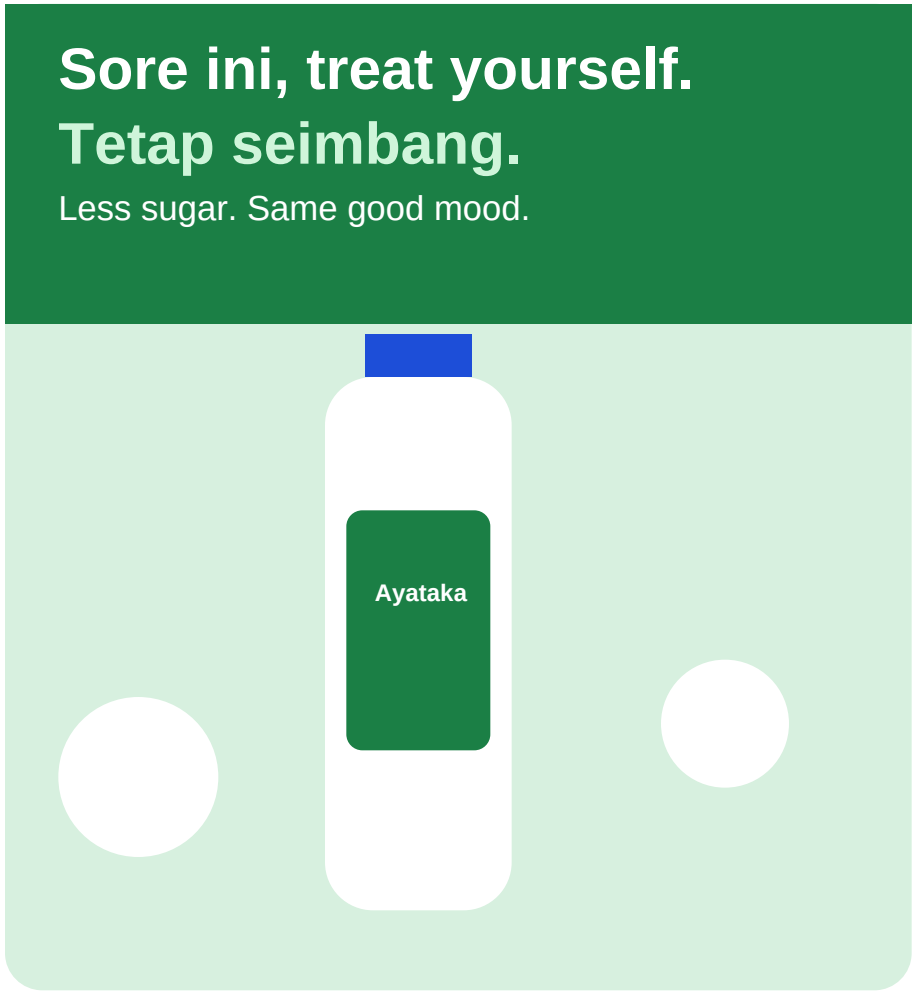
- A/B test creative
- Pre vs post uplift in pilot stores
- Causal impact vs control cities

Year-5 targets

- Health association: **18%** to **30%**
- Digital share: **11%** to **16%**
- Healthy growth held at 8-10%/yr

Next Social Post: Instagram / TikTok

"Treat Moments, Balanced": keeps the fun, adds health credibility



Format: 15-sec Reel / TikTok with a local creator: a 3pm "treat moment" with a chilled Ayataka.

Caption: *Jam 3 sore, waktunya treat diri sendiri. Kurangi gula, tetap happy. Tag teman yang butuh jeda seimbang.* #TreatMomentsBalanced

Why it works

- Bridges **18%** "balance" to **61%** "fun"
- Speaks to the **72%** monitoring sugar
- Short video fits where **82%** of Gen Z discover drinks
- Link drives to a GoFood / GrabMart bundle

Test: A/B taste-led vs balance-led hook.
